

## INSTALLING THE UPDATED FENDER MOUNTS

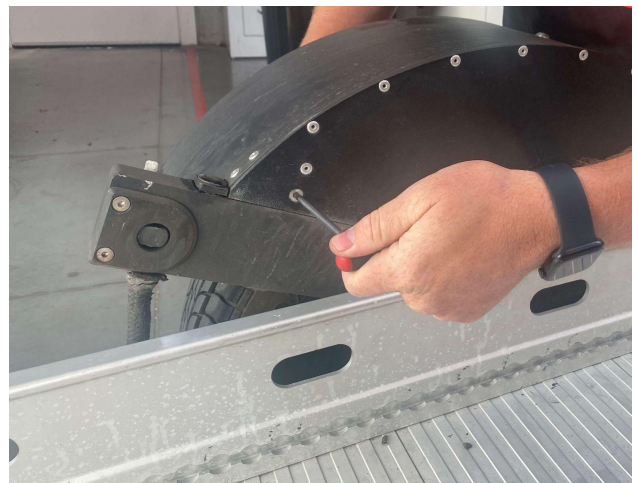

This tutorial explains how to install the updated fender mounts on a Futura lowering trailer.

You will need:

- Fender mount update kit
- 5mm or ¼" drill
- Mallet
- 10mm socket set
- Number 4 Allen key

### THE PROCESS

**Step 1.** Lower the trailer halfway and remove the fender security bolt using the 10mm socket and Allen key. Note: you may need to use a punch to punch the fender security bolt out.

**Step 2.** Unplug the fender light plug and remove the fender.

**Step 3.** Remove each push button fender bracket. Tap the shaft of each rivet that secures the bracket into the rivet, using a new rivet supplied as a punch.

**Step 4.** With the rivet shaft punched out, use a 5mm or ¼" drill to drill out the rivets and remove the push button fender bracket from the fender.

**Step 5.** Use a 10mm socket to remove the original fender latch ball post from the lifting arm.

If the fender latch ball does not rotate, this is due to Loctite not releasing. Heat the ball post with a heat gun to soften the Loctite and remove the ball post using multi-grip pliers.

**Step 6.** Nestle the new fender latch screw inside of the new fender latch post and apply a medium-strength thread locker to the thread of the new latch screw.

**Step 7.** Align the new fender latch post and screw inside the lifting arm. Using the new locking pin as an alignment tool, ensure that the holes in the fender latch post run parallel with the lifting arm.

**Step 8.** Use Allen key to fasten latch hardware in place.

**Step 9.** Reposition the fender on the trailer.

**Step 10.** Install the new fender latch mount over the fender latch hardware. Install one rivet in the bottom hole of the latch mount. Using a 5mm drill bit, drill through the top hole of the latch mount and through the fender before installing the second rivet.

**Step 11.** Install the fender latch pin to safely secure the fender to the trailer.
